Letter of Motivation

Since the beginning of my Bachelor studies I was planning to spend some time of my studies abroad. Now I'm looking forward towards the opportunity to experience the Thai culture and people in a semester abroad at the Mahidol University in Bangkok.

Nowadays engineering projects often involve the work with different departments all around the globe. The challenge of working on such international projects is an intriguing field of work and one possible goal for my future career.

Currently, I'm studying Mechanical and process engineering (M. Sc.) in my 2nd semester and I have a particular interest in the complex processes of production, aircraft propulsion and renewable energies. Therefore, I'm planning to take courses in the fields mentioned above, like:

- Production planning and control
- Principles of logistics and supply chain management
- Combustion theory
- Advanced fluid mechanics
- Solar energy technology
- Advanced renewable energy technology

Yours sincerely,

Stefan Berger
